. A: SketchUp does not support PDF export as far as I know (it does support most of the newer raster/vector formats though). There is probably a plugin to do it. As you see in SketchUp, there is an option to export 3D mesh to 3D PDF, but it's a separate plugin. This application claims priority to Japanese Application No. P2001-220398 filed Jul. 20, 2001. 1. Field of the Invention The present invention relates to a method of producing a semiconductor device. More particularly, the present invention relates to a method of forming an interconnect pattern of a lower wiring layer and an upper wiring layer in a semiconductor device. 2. Description of the Related Art In accordance with a recent trend to integrate a semiconductor circuit in a smaller area, widths and spacing intervals of interconnect lines have been accordingly decreased to 1 μm or smaller. Recently, a dielectric film has been replaced by a substance having low dielectric constant (low-k film) for the purpose of reducing interconnect delay and crosstalk noise. When forming a metal interconnect, for example, Cu is generally used as a conductive material. Recently, however, a lower wiring layer formed of Cu is formed using a damascene process. In the damascene process, a trench is formed by etching a dielectric film, a barrier metal is formed in the trench, Cu is filled in the trench, and then the barrier metal is removed by CMP (Chemical Mechanical Polishing) to form a Cu interconnect. In order to suppress a resistance of the damascene process, there has been proposed a technique of forming a barrier metal composed of ruthenium or ruthenium oxide between the barrier metal and the lower wiring layer, and forming a Cu seed layer thereon. As shown in FIG. 1, first, a dielectric film 2 is formed on a silicon substrate 1, and a trench 5 penetrating the dielectric film 2 is formed. A barrier metal film 3 composed of TaN, Ta, TiN or TaO is formed in the trench 5. Then, as shown in FIG. 2, a Cu seed film 7 is formed by sputtering or chemical vapor deposition (CVD). The Cu seed film 7 is generally formed so that the Cu film grown in the following Cu plating process contains an element that serves 3da54e8ca3
